Summary

Applied Mathematics and Statistics graduate with 2 years of experience across data science, data engineering and analytics. Hands-on experience developing data pipelines, audit and exception-detection solutions, NLP-based matching and dashboards using Python, Pandas, MongoDB, Azure and Power BI.

Skills

Programming Languages: Python, R, MATLAB, Java

Libraries: Pandas, NumPy, Matplotlib, Seaborn, scikit-learn, TensorFlow, Keras, PyMongo, Tidyverse, lubridate, caret

Databases & Cloud: MongoDB, Studio 3T, Azure Blob Storage, Docker

Analytics & BI: Microsoft Power BI, Tableau, Dataiku, Minitab

Developer Tools: Claude Code, GitHub, VS Code, Jupyter Notebook, RStudio, Postman, LaTeX

Languages: Arabic (Native), English (Fluent), Spanish (Beginner)

Experience

Graduate Trainee – Data Science | Saal.ai

Abu Dhabi, UAE

Sep 2024 — Sep 2026

- Primary developer of a procurement audit platform that ingests Microsoft Dynamics 365 ERP data from Azure Blob Storage and covers procure-to-pay, vendor master data, and user access rights, authoring 28 of its 38 exception checks.
- Designed the platform's Delegation of Authority control set, six checks that trace ERP workflow records to flag purchases approved by the wrong person or at fewer levels than company spending limits require.
- Built four controls over payments and vendor master data, extending the platform to treasury payment exports alongside the ERP.
- Applied NLP-based matching within the pipeline, combining fuzzy and Levenshtein similarity with a Cross-Encoder transformer model to flag near duplicate line item descriptions.
- Containerized the pipeline with Docker, scheduled it with APScheduler, scaled it to run over one or all business entities, and added automatic retry with backoff on Azure ingestion.
- On the platform's client-facing dashboard, replaced a pop-up with a standalone, shareable exception page and added an info panel explaining each check.
- On a separate project, developed ETL pipelines in a microservices architecture using Python, Pandas, and MongoDB, working with the team through GitHub.
- Built interactive Power BI and Tableau dashboards for proof-of-concept projects.
- Designed ER diagrams, authored technical documentation for multiple use cases, and supported client teams in resolving data availability and update issues.

Data Scientist Intern | Saal.ai

Abu Dhabi, UAE

Mar 2024 — Sep 2024

- Developed skills in NoSQL databases (MongoDB, PyMongo) and built a REST API with Flask, validated using Postman and documented with Swagger UI.
- Completed Dataiku Core Designer and ML Practitioner certifications, applying them to design a data processing flow.
- Applied Python (Pandas) for data cleaning, transformation, and feature engineering, including a pipeline that improved predictive workflows within a microservices framework.
- Collaborated with UI/UX and frontend teams to design and deliver a dashboard solution, progressing from wireframe to production.

Data Analyst Intern | Daman – National Health Insurance Company
Jul 2022 — Sep 2022

Abu Dhabi, UAE

- Performed data analysis, visualization, and reporting using Microsoft Power BI to support business intelligence initiatives.
- Built dashboards to highlight key performance metrics, cost drivers, and trends.

Projects

Stmnt: Bank Statement Analyzer | Website | App Store
Feb 2026 — Present

- Sole developer of an iOS app, published on the App Store, that reads bank statement PDFs from any bank and turns them into spending breakdowns, subscription tracking, and spending forecasts.
- Built the pipeline that pulls transactions out of unstructured PDF text with Google Gemini, then categorizes them, removes duplicates, and flags unusual spending across more than 35 currencies.
- Developed the app in Flutter and Dart, working through an agent-driven workflow with Claude Code while owning the architecture and reviewing every change.

On a Generalization of Kernel RLS to Nonlinear State-space Systems | GitHub
Sep 2022 — May 2023

- Researched and wrote the full paper for the senior graduation project at Khalifa University, supervised by Prof. Ibrahim Elfadel and Prof. Jorge Zubelli.
- Derived the ARMA learning algorithm and implemented least squares, recursive least squares, and kernel recursive least squares (KRLS) in MATLAB.
- Tested KRLS on the Santa Fe time series prediction benchmark, compared the results against previously published ones, then analyzed how the kernel adaptive ARMA (KAARMA) algorithm improves on it.

Education

Khalifa University – BSc in Applied Mathematics and Statistics
2018 — 2023 CGPA: 3.30

Abu Dhabi, UAE

Al Nahda National Schools – High School Diploma
2015 — 2018 Grade: 95.9

Abu Dhabi, UAE

Certifications & Awards

Supervised Machine Learning: Regression and Classification — DeepLearning.AI (Dec 2024)
Dataiku ML Practitioner — Dataiku Academy (Apr 2024)
Dataiku Core Designer — Dataiku Academy (Apr 2024)
Python for Data Analysis Workshop — Khalifa University (Jun 2022)
Dean's List — Khalifa University (2021 & 2022)

Test Scores

GRE General Test (Jan 2023): Verbal Reasoning 139, Quantitative Reasoning 151, Analytical Writing 3.5
Emsat Achieve Result: English 1875 (Feb 2023), Math 1025 (Aug 2018)

Volunteering

Feed and Reap Initiative Abu Dhabi — Absher Ya Watan Team (Apr 2023): Participated in Ramadan 2023 meal packing and distribution.
Lead Peer Mentor — Khalifa University (2022–2023): Mentored 9 freshmen students during Fall 2022 and Spring 2023.
Mawhibatna Program Volunteer — Sandoog Al Watan (Jul 2019): Volunteered as an organizer supporting program activities.
